

Page one — US Letter

Write on this page with the pen tool. Pressure from a stylus varies the stroke width; with a mouse the width follows how fast you move, so lines still taper naturally at the ends.

Try the highlighter over this paragraph — it uses a multiply blend, so the text underneath stays readable rather than being washed out. Then export the document and check the highlight survives the round trip.

The eraser removes whole strokes rather than nibbling pixels, which keeps the file small and every edit undoable.

Page two — A4

Write on this page with the pen tool. Pressure from a stylus varies the stroke width; with a mouse the width follows how fast you move, so lines still taper naturally at the ends.

Try the highlighter over this paragraph — it uses a multiply blend, so the text underneath stays readable rather than being washed out. Then export the document and check the highlight survives the round trip.

The eraser removes whole strokes rather than nibbling pixels, which keeps the file small and every edit undoable.

Page three — rotated 90°

Write on this page with the pen tool. Pressure from a stylus varies the stroke width; with a mouse the width follows how fast you move, so lines still taper naturally at the ends.

Try the highlighter over this paragraph — it uses a multiply blend, so the text underneath stays readable rather than being washed out. Then export the document and check the highlight survives the round trip.

The eraser removes whole strokes rather than nibbling pixels, which keeps the file small and every edit undoable.
